Multiplication Problem Solving

Directions: Solve the multiplication problems below. Use objects, act it out, draw a picture, or write an equation for each problem.

When my aunt bakes blueberry muffins, she likes to be sure each muffin has the same number of berries. Auntie made 6 muffins and each muffin had 11 blueberries. How many blueberries were there in all?

Candace was decorating party bags. She had 7 party bags and drew 6 stars on each bag. How many stars did she draw altogether?

In art class, we made bracelets for the craft show. There were 5 groups of kids, and each group made 10 bracelets. What was the total number of bracelets made for the craft show?

Flapjack the beagle just had puppies. She had 8 puppies and each puppy had 9 brown spots on its back. How many spots were on all of the puppies?

After collecting wildflowers from the hill, Darcy and Clark filled 6 vases with the flowers. Each vase had 9 flowers. How many flowers did the kids collect?
