

Volume Song

Music and Lyrics by: Have Fun Teaching

If you multiply the Length times Width times Height.
You will get the volume of a figure right.

Length X Width X Height gives you the volume!

Length is Long, Height is High, Width is Wide.
The volume measures all the cubic units inside.

Length X Width X Height gives you the volume!

Take a solid shape.
One that's 3-Dimensional.
Make a formula that's Oh So Simple.

Length X Width X Height gives you the volume!
Length X Width X Height gives you the volume!
