

# Weather Song

Music and Lyrics by: Have Fun Teaching

Weather is a combination of many things  
It never stays the same; it's always changing  
Precipitation will come in many forms  
Depending if the temperature is cold or warm

If it's cold, you see, it could be windy  
Blowing snow and sleet could make the roads icy  
If it's warm, you know, you could see a tornado  
Watch the rain pouring down and see a thunderstorm show

Hey, the weather is the state of the atmosphere  
Hot, cold, wet, dry, look into the sky  
Hey, the weather is the state of the atmosphere  
Stormy, cloudy, calm, clear, weather happens all year

Spin Around, Do The Tornado

Meteorology is the study of the weather  
If we look at the climate we can predict it much better  
Warm fronts, cold fronts, lightning and thunder  
To find the temperature you can use a thermometer

Hurricanes form in the warm ocean water  
The most powerful storm when compared to any other  
Tornadoes are smaller, but the damage can be greater  
A watch means it's possible, a warning: take cover!

Dance like it's windy. Dance like it's warm. Dance like it's cold. Now, dance in a storm.

Clouds come in many different sizes and shapes  
Cold air rises and makes water vapor that creates  
Condensation, then precipitation, here's a cloud list:  
Fog, stratus, cumulus, nimbus, cirrus

Lightning is striking at 50,000 degrees  
I hear the sound of thunder and feel the cool weather breeze  
Red sky in the morning - take warning of the storm  
Red sky in the night - the weather will be a delight
